

DR Portable Refractometer

Hand held portable refractometer for high Brix or wine applications

- ATC to 20 °C solutions
- Automatic shut off
- Measurements in 2 seconds
- Prism temperature

Description

The DR range of hand held portable refractometers was brought to market in 2011 to work in a few specific applications that the OPTi portable refractometers could not.

DR "HiBrix"

Two different DR "HiBrix" portable refractometers are currently available providing you with temperature compensated sugar measurement for samples above 54 °Brix such as jam, marmalade, sugar syrups and honey. HiBrix refractometers have an additional scale offering the additional ability to express results in the refractive index scale with ATC based on sugar.

DR Wine

DR Wine hand held portable refractometers differ from the OPTi by offering a more extensive choice of scales within a single refractometer.

DR refractometers are fully inspected prior to shipment and all models carry a one year warranty. All portable refractometers are supplied with instruction manual, soft carrying case and Certificate of Conformity.

Specifications

Specifications vary depending on the refractometer model and range of the instrument. Please visit our website www.globalw.com/products/DR.html, to see the full line of DR refractometers.

Options and Accessories

Prices and options vary depending on the refractometer model and range of the instrument. Please visit our website, www.globalw.com/products/DR.html, to see the full line of DR refractometers.
